

this is my first L^AT_EX document.
this is my first LaTeX.

Suppose we given a rectangle function with side lengths $(x+1)$ and $(x+2)$.
Suppose we given a rectangle function with side lengths $(x+1)$ and $(x+2)$. Then
the equation $A = x^2 + 4x + 3$ represents the area of the rectangle.

Suppose we given a rectangle function with side lengths $(x+1)$ and $(x+2)$. Then the equation

$$A = x^2 + 4x + 3$$

represents the area of the rectangle.
